

## MULTIPLE COMPANY REPORTING

### FAMILY BUSINESS AND RELATED PARTY RULES

There are a number of rules under the federal income tax code where individuals are deemed to own corporate stock or other equity interests that are owned by their family members and related entities. Ahola's Multiple Company Reporting provides an important tool to support compliance with these Related Party rules.

### Simplify HCM Compliance with Aggregate Reporting for family-owned companies with multiple federal IDs

Employers managing payroll for separate, but related companies want to access HR and payroll information at both the individual child entity level, and the aggregated parent company level. Yet many payroll systems can't accommodate that function, or are limited in the type of data that can be aggregated.

Ahola's iSolved Human Capital Management system provides a robust solution that gives companies with multiple entities a wide range of reports that span all their federal IDs. Not only does this reporting save significant staff time and accelerate access to vital information, it is an important tool to support compliance with regulations such as the Affordable Care Act.

## A wide range of instant-access reports that aggregate parent-child company data

Ahola's iSolved system makes it easy to aggregate parent-child company information in these standard reports:
